Carrot Box Instructions

In Design Space open a new project. .

Upload the Carrot SVG into Design Space and add it to the Canvas.

There are 7 items in the tool box on the right hand tool bar, that are just lines. These are the scorelines for the box. Highlight all of them by clicking each with the Shift button pressed. Under Operations on the top tool bar convert these to Scorelines.

The scorelines then need to be Attached to their side piece. While the scorelines are still highlight hold down the shift button again and select the carrot shape from the right hand tool box. Now everything is highlighted and you can select Attach in the lower right hand corner.

I was only using 8.5 x 11 card stock so I decreased the width (located in the middle of the top tool bar) and changed it to 8 so it would fit on my paper.

Click Make it

If you resized your carrot you can select 8.5x11

Click continue and select your base material.

If you are using a scoring stylus make sure to switch the tool.

Load your mat and when the C button flashes make the cut. Unload the mat and remove the carrot from mat.

Putting the box together is as simple as folding on the scorelines, gluing the tab and tying string or raffia to close the box. (I used raffia, and since I didn't have green I died it with watered down green paint.) If you want a more realistic carrot you can take a brown marker and make lines on it.
